**Application No.:** 10/723,824 **Office Action Dated:** June 4, 2007

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:** 

1. (Currently Amended) A computer-implemented method for indicating, on a computer

display, the values of variables in a software program under development, the computer-

implemented method comprising:

detecting the position of a pointer on the computer display associated with an

expression in the program under development;

reading and evaluating the expression;

displaying at least one a first item value in a first item window on the computer

display, the item value associated with a variable in the expression, wherein an indication of

at least one sub-item value associated with the variable is present; and

responding to a pointer request for a first sub-item value by displaying a first sub-item

window on the computer display containing the first sub-item value, the first item value in the

first item window is related to the first sub-item value in the first sub-item window, the first

sub-item window being separate from the first item window on the computer display; the first

item window and the first sub-item window displayed simultaneously.

2. (Original) The method of claim 1, wherein, the first item value remains visible when

the first sub-item value is displayed, the displayed first sub-item value being accommodated

to fit within a limited screen size by the use of at least one scroll control present in the first

sub-item window.

3. (Original) The method of claim 1, further comprising:

responding to a pointer request for a second sub-item value by displaying a second

sub-item window containing second sub-item values.

Page 2 of 10

**Application No.:** 10/723,824 **Office Action Dated:** June 4, 2007

4. (Original) The method of claim 3, wherein the pointer request for a second sub-item

value dismisses the first sub-item window before displaying the second sub-item window.

5. (Previously Presented) The method of claim 1, further comprising:

allowing the first item window and the first sub-item window to become transparent

upon request, wherein displayed information can be viewed during transparency of the first

item and first sub-item windows without dismissing the first item and first sub-item windows,

and wherein the transparency can be reversed upon request to again view the first item and

first sub-item windows.

6. (Original) The method of claim 1, further comprising:

displaying a menu of operations that can be conducted to alter one or more of format

and value of a variable being viewed.

7. (Original) The method of claim 6, wherein the format of a variable being viewed

comprises one of simple text, hexadecimal, binary, decimal, text, HTML, XML, and custom

editor/viewer.

8. (Previously Presented) A method of displaying related data sub-items corresponding

to a cursor-selected object displayed on a computer screen, the method comprising:

determining that a cursor is positioned to point at the cursor-selected object on the

computer screen;

loading the cursor-selected object;

evaluating the cursor-selected object to determine if the cursor-selected object:

has a variable value;

**Application No.:** 10/723,824 **Office Action Dated:** June 4, 2007

has related data sub-items; and

if the related data sub-items are capable of expansion into lower-tier sub-items;

assembling values for the cursor-selected object and the related data sub-items; and

displaying on the computer screen the values of the cursor–selected object in a first display window and the related data sub-items along with an indication of a presence of the lower-tier sub-items in a second display window, the first and second display windows displayed simultaneously.

- 9. (Original) The method of claim 8, wherein evaluating the cursor-selected object further comprises evaluating an expression associated with the cursor-selected object.
- 10. (Original) The method of claim 8, wherein displaying the values of the cursor-selected items and related sub-items further comprises displaying a variable associated with the cursor-selected object and values of the variables respectively.
- 11. (Previously Presented) The method of claim 8, wherein the indication of a presence of the lower-tier sub-items is a symbol to indicate that lower-tier sub-items exist and can be selected for display.
- 12. (Previously Presented) The method of claim 8, further comprising allowing the displayed values to become temporarily transparent allowing visual examination of underlying displayed information without dismissing the first and second display windows.
- 13. (Previously Presented) A system for displaying data tips related to a cursor-selected object displayed on a computer screen, the system comprising:

a computer screen to display a cursor-selected object and the data tips;

**Application No.:** 10/723,824 **Office Action Dated:** June 4, 2007

a processor for executing instructions corresponding to the method of:

determining that a cursor is positioned to point at the cursor-selected object on the computer screen;

loading and evaluating the cursor-selected object to determine if the cursor-selected object:

has a variable value;

has related data sub-items; and

if the related data sub-items are capable of expansion into lower-tier sub-items;

assembling values for the cursor-selected object and the related data subitems; and

displaying the values of the cursor–selected object in the data tips using a first window located adjacent to the cursor selected object, displaying the related data sub-items in a second window, the second window having an indication of the lower-tier sub items if the lower-tier sub-items exist, wherein the indication of the lower-tier sub-items is a symbol to indicate that lower-tier sub-items exist and can be selected for display in a third window simultaneously with the first and second window.

- 14. (Previously Presented) The system of claim 13, wherein evaluating the cursor-selected object further comprises evaluating an expression associated with the cursor-selected object.
- 15. (Previously Presented) The system of claim 13, wherein displaying the values of the cursor-selected object further comprises displaying a variable associated with the cursor-selected object and values of the variables.

**Application No.:** 10/723,824 **Office Action Dated:** June 4, 2007

16. (Cancelled)

17. (Previously Presented) The system of claim 13, wherein the data tip window becomes

temporarily transparent upon request allowing visual examination of underlying displayed

information without dismissing the data tip window.

18. (Currently Amended) A machine-readable storage medium having instructions

therein, executable by a machine to perform a method comprising:

determining that a cursor on a computer screen is positioned to point at the cursor-

selected object on the computer screen;

loading the cursor-selected object;

evaluating the cursor-selected object to determine if the cursor-selected object:

has a variable value;

has related data sub-items; and

if the related data sub-items are capable of expansion into lower-tier sub-

items;

assembling values for the cursor-selected object and the related data sub-items; and

displaying on the computer screen the values of the cursor–selected object in a first

display window and the related data sub-items along with an indication of a presence of the

lower-tier sub-items in a second display window, the first and second display windows

displayed simultaneously.

19. (New) The method of claim 1, further comprising:

Page 6 of 10

**Application No.:** 10/723,824 **Office Action Dated:** June 4, 2007

displaying a menu of operations to be performed on the first sub-item, the operations comprising editing the first sub-item value.

20. (New) The system of claim 13, further comprising:

displaying a menu of operations to be performed on the lower-tier sub-items, the operations comprising editing the first sub-item value.
